SELF CERTIFICATION FOR THE INSTALLATION OF CARBON MONOXIDE DETECTORS AND SMOKE ALARMS

Pursuant to the California Residential Code sections R314 and R315, a carbon monoxide alarm is required on each level of a dwelling (Example; a two-story home should have a minimum of 2 carbon monoxide detectors). A smoke alarm is required at each level and at each bedroom. (Example; a two-story home with 3 bedrooms should have a minimum of 5 smoke alarms. A smoke alarm in each bedroom and a smoke alarm joining the carbon monoxide alarm on each level).

Though this explanation applies to most residential dwellings, it is not an exhaustive explanation of all alarm placement scenarios that the homeowner is responsible for. For more information refer to the California Residential Code Sections R314 and R315.

I affirm that my building is in compliance with the aforementioned smoke alarm and carbon monoxide detector requirements which is required for final building inspection.
